2. Project Description Paragraph:

Move & Learn is a fun and interactive game that helps children with physical disabilities like cerebral palsy to develop their motor skills. Using motion controls, the app adapts to gestures and creates activities such as catching colorful balloons. These games are designed to fit each child's unique pace and abilities, making sure everyone can join in and enjoy.

The game is meant for kids, but parents, caregivers, and therapists can play along too, creating a supportive and encouraging environment. With short, engaging sessions full of cheerful sounds and bright visuals, kids stay motivated while practicing important skills like movement, focus, and coordination. Plus, the app gives visual and audio feedback to keep the children motivated.
